GENERAL NOTES

1. UPRR forces will perform all track work, with the exception of removal of existing tracks. UPRR will cut the existing rails and the contractor shall remove and dispose of all track material with the bridge removal work. The Contractor will be responsible for constructing proposed track bed up to the top of the sub-ballast layer. UPRR will furnish & install all ballast, ties, rail, and other track materials.

2. Existing and new track within the project limits will be surfaced and lined by UPRR forces once all other work is complete.

3. Contractors shall notify Service Alert, (800) 642-2444, UPRR Fiber Optics Hotline (800) 336-9193, and the Chicago Utility Alert Network (312) 744-7000 48 hours prior to any excavation. The USA Authorization Numbers shall be kept at the job site.

4. No work whatsoever shall be commenced without first notifying the UPRR Engineer.

5. The Contractor shall comply with all Federal, State, County, and City Laws and Ordinances and Regulations of the Department of Industrial Relations, OSHA, NPDES and Industrial Accident Commission related to the safety and character of the work, equipment and labor personnel.

6. Contractor shall be responsible for coordinating with all Utility agencies.

7. Contractor shall protect in place (by any means necessary) all existing utilities to remain unless otherwise specified herein, contractor shall be responsible for the complete repair at his expense, for any damage to existing utilities, structures, or other site features, as a result of his work.

8. Prior to placing curbs, pavements, base, subbase, track, etc., all underground utilities shall be installed, backfill completed, and the Engineer notified by each of the utility companies having facilities within the work area, that the utility installation has satisfactorily passed acceptance tests.

9. All existing underground utilities within the UPRR ROW, that are not to be re-used shall be abandoned in place. All existing pipelines to be abandoned in place shall be cement slurry filled and capped at least 3'-0" below top of proposed subgrade.

10. Contractor shall verify locations and elevations of existing utilities whether known or unknown prior to beginning construction.

11. Any underground structures such as cesspools, cisterns, mining shafts, tunnels, septic tanks, wells, and pipelines not located prior to construction shall be brought to the attention of the engineer for determination of appropriate action such as removal or treatment in a manner judged suitable to the engineer.

12. Contractor shall coordinate location of all proposed utilities with UPRR to assure accuracy of utility connections and compliance with local codes.

13. Any existing conditions found to be a variance with these drawings must be immediately reported to the Engineer.

14. Contractor shall maintain and clean to the satisfaction of the Engineer, all access and service roads used during construction.

15. Contractor shall perform all construction in such a manner as to protect adjacent existing buildings, and other site elements which are to remain in service.

16. Contractor shall provide As-built Drawings for all improvements.

17. No field changes will be permitted without direct written authorization from the UPRR Engineer or his representative.
18. Contractor shall coordinate work which affects adjacent property owners. Any questions or agreements between adjacent property owners and contractor shall be made in writing. A copy of such agreement shall be provided to the UPRR Engineer or his representative.

19. The contractor is responsible for preparing a Stormwater Pollution Prevention Plan (SWPPP) to comply with State regulations.

20. Right-of-way lines shown on the plans were taken from existing UPRR right-of-way map and are approximate.

21. Match lines for sheets are based on the existing Main Line stationing unless otherwise specified.

22. Track laying, ballasting, and installation of road crossing panels will be done by UPRR unless otherwise stated.

23. The contractor is responsible for the removal of all pavement markings that will be in conflict with the proposed work.

24. Contractor shall comply with all IDOT specifications for construction of public improvements requirements.

25. Contractor shall maintain at least one access to all affected business. If necessary, multiphase construction shall be utilized.

26. All work must be coordinated with the UPRR to minimize track outage time and disruption of train service. The contractor shall submit for approval his proposed sequence of operations prior to the start of construction.

27. Removal of existing viaduct lighting equipment will be performed by the City of Chicago, Department of Streets and Sanitation, Bureau of Electric. The contractor must schedule and coordinate this work with the city. All expenses or charges by the city related to this work will be incidental to this contract.

28. The contractor shall take special care to avoid damage to the existing utilities under the public streets from excessive surface loads during construction activities. Video inspection of the existing sewer shall be performed before and after construction in accordance with the requirements of the City of Chicago Department of Water Management. Any damage to the existing utilities caused by work under this contract must be repaired or replaced at the contractor's expense.

29. All frames and lids removed from abandoned sewers and appurtenances must be returned to the Chicago Department of Water Management, Sewer Section.

30. In case of damage to the City of Chicago sewers, private and public drains, sewer structures and/or bench monuments, the contractor shall immediately contact the Department of Water Management at (312) 747-7892 or (312) 747-7893.

31. Stockpiling of removed materials and/or construction debris on the job site will not be permitted and shall be removed from the job site each and every day and disposed of in accordance with article 202.03 of the Standard Specifications. Failure to comply with this requirement shall be considered a traffic control deficiency and will be subject to charges in accordance with the item Traffic Control Complete.

32. The contractor must notify the Department of Streets and Sanitation at 312-746-4524 72 hours prior to the need for towing/relocation of vehicles. The City of Chicago will be responsible for removing parked vehicles located in the scheduled work area. Signs preventing parking will be posted by the commissioner or his staff 72 hours before the work is scheduled. Prior to posting signs the commissioner shall notify the Alderman's office of the resurfacing schedule. The police are to be present to issue tickets and supervise towing prior to the relocation of vehicles.

33. In the event that the work to be performed on a street segment where parking has been prohibited will be postponed for 5 working days or more, the contractor must notify the commissioner to remove the "No Parking" signs and advise the commissioner when the work will resume for the commissioner or his staff to re-post the "No Parking" signs 48 hours prior to resumption of work.

34. The contractor will not be allowed to set up a yard or field office on city or state property without written permission from IDOT or the City of Chicago.

35. The contractor is to restore all unpaved areas damaged during construction operations to their original condition at no additional cost to the city or railroad.

36. The contractor shall provide access to abutting property at all times during the construction of this project, except for periods of short duration.

37. Dimensions: it shall be the contractor's responsibility to verify all dimensions and conditions existing in the field prior to ordering materials and beginning of construction.

38. Station and offsets given for proposed catch basins are to the center of the lid. Adjust the base as necessary to connect to existing sewer.

39. The Contractor is responsible for obtaining all permits (including payment of permit fees), bonds and insurance for permits required by the City of Chicago for construction of the project. This includes permits issued by the Department of Transportation, Department of Water Management, and others.

40. The Contractor is responsible to coordinate work for the project. CDOT will complete water main replacement, lighting removal and some roadway work before Contractor begins. CDOT will also complete work after Contractor work is completed. Any new CDOT roadway work shall be protected by Contractor. Any damage of this new CDOT work must be repaired at the expense of the Contractor.

41. The Contractor shall install posted clearance sign for proposed bridge. Contractor shall coordinate with the City of Chicago regarding the clearance to be posted, sign type and sign location. The furnishing and installation of vertical clearance signs is considered incidental to the project work.

DESIGN CRITERIA

1. UPRR Standard Plans and Specifications

2. Illinois Department of Transportation (IDOT) Standard Specifications for Road and Bridge Construction

3. Chicago Department of Transportation (CDOT) Regulations for Openings, Construction and Repair in the Public Way

SURVEY NOTES

1. Railroad stationing for project profiles and alignments is based on stations established for chord definition spiraled curves at the centerline of the existing UPRR Main Line unless otherwise noted.

2. The contractor is responsible for the preservation of all survey control monuments. In the event monuments are damaged or destroyed by the contractor, the Engineer will replace the monument solely at the contractor's expense.

TRAFFIC NOTES

1. All barricades, warning signs, lights, devices, etc. for the guidance of vehicle traffic and pedestrians must conform to the Manual on Uniform Traffic Control Devices (MUTCD), current edition, IDOT and CDOT standards.

2. The contractor will ensure that all barricades, signs, lights, and other devices installed by him are operational every day, including Sundays and holidays. The contractor shall make twice daily inspections of barricades, signs, lights and other devices installed by him to ensure proper placement and functioning of warning devices. In the event of severe weather conditions, the contractor must furnish any additional personnel required to properly maintain all traffic control devices. The contractor shall provide a manned 24-hour / 7 day a week contact number to respond to requestrequests and emergencies related to the placement and maintenance of the traffic control devices throughout the project duration.

3. The contractor is responsible for the prompt replacement and/or repair of all traffic control devices and appurtenances damaged or disturbed due to construction.

5/24/2021

TRAFFIC CONTROL GENERAL NOTES:

1. All signing must be in accordance with the latest applicable provisions of the State of Illinois "Standard Specifications for Road and Bridge Construction", the details in these plans must be in accordance with the latest edition of the IDOT Bureau of Design and Environment highway standards and the latest edition of the "Manual on Uniform Traffic Control Devices", in effect on the date of invitation for bids.
2. Longitudinal dimensions shown on these plans may be adjusted to fit field conditions as directed by the Commissioner.
3. The Contractor must be responsible for ensuring that all barricades, signs, lights and other devices installed by him/her are in place and operating 24 hours each day including Sundays and holidays during the time this construction is in effect.
4. All existing signing that is not applicable while the construction is in effect must be completely covered by the Contractor.
5. The sizes of all signs not specified in these plans must be as required by the Manual on Uniform Traffic Control Devices.
6. As a minimum, all amber flashing lights that are required must meet the requirements for Type A - low intensity flashing lights in article 702.04 of the standard specifications. All lights shall operate during hours of darkness. Only lights that have been approved by the Illinois Department of Transportation must be used.
7. The Contractor must maintain access to all private and commercial driveways during construction.
8. Sidewalk access must be maintained on one side of the street during all stages, except when there is a full closure. Any closed sidewalks must be appropriately barricaded. Use Standard 701801.
9. All walkways must be clearly identified and adequately protected from motor vehicle traffic and free of any obstructions and hazards such as holes, debris, mud, construction equipment, stored materials, etc.
10. Proposed maintenance of traffic signing must be covered or removed when not required during a specific stage of construction.

11. Changeable message signs to be provided at locations shown on plans or determined by the Commissioner.
12. The Contractor must conduct his/her work in such a manner that emergency vehicles will have access to the work area at all times.
13. The Contractor will be responsible for the proper location, installation, maintenance, relocation, and removal of all traffic control devices.
14. The Contractor is responsible for recording the existing pavement marking patterns and limits prior to existing striping removal.
15. All existing pavement markings removed or impacted within the project limits must be replaced in-kind and to CDOT rules and regulations.
16. Unwanted temporary pavement markings must be removed by the Contractor as ordered by the Commissioner.
17. The contractor must notify CDOT 72 hours before commencing construction.
18. The Contractor is responsible for all no parking notifications required by traffic shifts.

TRAFFIC CONTROL SUMMARY OF QUANTITIES:

BILL OF MATERIAL				
REQD.	UNIT	DESCRIPTION	STORE ITEM NO.	ORDERED BY
* 713.1	FOOT	TEMPORARY PAVEMENT MARKING, LINE 4"		CONSTRUCTOR ↓
137.5	FOOT	TEMPORARY CONCRETE BARRIER

GENERAL UTILITY NOTES :

COMED :
USE EXTREME CAUTION NEAR ComEd FACILITIES. HAND DIG WHILE CROSSING 69/138/345 kv TRANSMISSION LINE. ComEd TRANSMISSION SHALL BE NOTIFIED 2 BUSINESS DAYS PRIOR TO THE START OF THE WORK. TO SCHEDULE AN ON SITE INSPECTOR DURING CONSTRUCTION, CONTACT LESLIE PASCHAL AT (630) 437-4767.

NO DIRECTIONAL BORING WITHIN 5 FEET OF COMED CONDUITS. CITY CONTRACTORS ARE REQUESTED TO TAKE EXTRA PRECAUTIONS WHEN WORKING NEAR COMED OVERHEAD WIRES. THESE WIRES ARE NOT INSULATED. COMED REQUESTS THAT THE CITY DIRECTIONAL BORE CONTRACTORS PROTECT ALL EXISTING COMED MANHOLES & CONDUITS WHEN CROSSING, ADJACENT TO OR IN THE NEAR VICINITY, BY DIGGING TEST HOLES TO ASSURE COMED FACILITIES ARE NOT DAMAGED, DURING THE DIRECTIONAL BORE PROCESS, & HAND DIG WHEN WITHIN 5 FT OR CROSSING FACILITIES. IF NEEDED CONTACT MICHELLE HO, 331-481-9108 WITH A 6-WEEK NOTICE.

CHICAGO DEPARTMENT OF WATER MANAGEMENT :
WATER MAINS AND SERVICES:

THE MINIMUM VERTICAL CLEARANCE (EDGE-TO-EDGE) FROM WATER MAINS AND SERVICES IS 18-INCHES. FOR GRID MAINS (WATER MAINS LESS THAN 16-INCHES) AND WATER STRUCTURES (VALVE BASINS, SERVICE CONTROL VALVES, ETC.) THE MINIMUM HORIZONTAL CLEARANCE (EDGE-TO-EDGE) IS THREE (3) FEET. FOR FEEDER MAINS (WATER MAINS 16-INCHES AND LARGER), THE MINIMUM HORIZONTAL CLEARANCE (EDGE-TO-EDGE) IS FIVE (5) FEET.ALL LIGHT POLE FOUNDATIONS MUST MAINTAIN A MINIMUM OF FIVE (5) FEET HORIZONTAL CLEARANCE (EDGE-TO-EDGE) TO ALL EXISTING WATER FACILITES.

FIRE HYDRANTS :

IN NO CASE SHALL THE INSTALLATION OF ANY PROPOSED FACILITY BE CLOSER THAN FIVE (5) FEET FROM A FIRE HYDRANT OR FIRE HYDRANT LEAD. EXTREME CAUTION IS TO BE TAKEN TO ENSURE THAT NO FACILITY OWNED AND MAINTAINED BY THIS DEPARTMENT (DWM) IS DAMAGED DURING CONSTRUCTION. IF DAMAGE OCCURS TO ANY FACILITIES, THE CONTRACTOR WILL BE HELD RESPONSIBLE FOR THE COST OF REPAIRING OR REPLACING THE FACILITIES.

DEPARTMENT OF WATER MANAGEMENT (DWM) SEWER REQUIREMENTS FOR EXISTING FACILITIES PROTECTION, AUGUST 2016.
FOR ALL GENERAL CLEARANCE REQUIREMENTS (NON-WATER):
UPON PROJECT COMPLETION, RESIDENT ENGINEERS MUST CONTACT THE DWM SEWER EVALUATION SECTION AT 312-747-4680 TO SCHEDULE A FIELD MEETING FOR PROJECT ACCEPTANCE.
DWM REQUIRES A MINIMUM HORIZONTAL CLEARANCE OF 1D (INNER DIAMETER OF THE SEWER) + 4' CENTER-TO-CENTER OR 4 FEET EDGE-TO-EDGE, WHICHEVER IS LARGER, AND A MINIMUM VERTICAL CLEARANCE OF 18" EDGE-TO-EDGE. IF EITHER OF THESE CONDITIONS ARE NOT MET, THE SEWER MUST BE REPLACED OR LINED.

ONLY FOR PARALLEL UTILITY INSTALLATIONS IN THE PARKWAY:
UPON PROJECT COMPLETION, RESIDENT ENGINEERS MUST CONTACT THE DWM SEWER EVALUATION SECTION AT 312-747-4680 TO SCHEDULE A FIELD MEETING FOR PROJECT ACCEPTANCE.
PRIVATE SEWER DRAINS (W/BASEMENTS) TYPICALLY HAVE APPROXIMATELY 5 FEET OF COVER. DUE TO POTENTIAL VERTICAL CONFLICTS IN THE PARKWAY, THE CONTRACTOR MUST TELEVISE ALL PRIVATE DRAINS AFTER CONSTRUCTION. A COPY OF THE DVD MUST BE PRESENTED TO THE DWM SEWER INSPECTOR FOR PROJECT ACCEPTANCE.

THE FOLLOWING NOTE MUST BE DISPLAYED ON THE CONSTRUCTION PLANS:
THE PROPOSED WORK ENCROACHES UPON MINIMUM CITY SEWER CLEARANCE REQUIREMENTS. EXTREME CAUTION IS REQUIRED DURING CONSTRUCTION. THE CITY SEWER MUST BE TELEVISED BEFORE AND AFTER CONSTRUCTION TO ASSESS ITS CONDITION. CONTACT THE DWM SEWER EVALUATION SECTION TWO BUSINESS DAYS PRIOR TO CONSTRUCTION AT (312) 747-4680 TO COORDINATE THE WORK.
IF SEWER DAMAGE OCCURS, THE CONTRACTOR AND/OR OWNER WILL BE RESPONSIBLE FOR THE COST OF REPAIRING, LINING OR REPLACING THE DAMAGED FACILITIES.

PEOPLES GAS :
PEOPLES GAS FACILITIES ARE PRESENT WITHIN CONSTRUCTION. USE EXTREME CAUTION NEAR ALL GAS FACILITIES DURING CONSTRUCTION AND RELATED EXCAVATION ACTIVITIES. HAND EXCAVATION IS REQUIRED TO FIELD VERIFY THE HORIZONTAL AND VERTICAL LOCATION OF GAS MAIN(S) PRIOR TO CROSSING AND WORKING WITHIN 3' OF ALL GAS FACILITIES. A MINIMUM OF 3' HORIZONTAL EDGE-TO-EDGE CLEARANCE IS REQUIRED FOR GAS MAINS WITH DIAMETERS OF 16" OR SMALLER, & 5' EDGE-TO-EDGE CLEARANCE FOR GAS MAINS WITH DIAMETERS 18" AND LARGER. MAINTAIN A MINIMUM OF 1.5' EDGE-TO-EDGE VERTICAL CLEARANCE ON GAS MAINS 16" OR LESS IN DIAMETER, AND 2' EDGE-TO-EDGE VERTICAL CLEARANCE ON 18" AND LARGER DIAMETER GAS MAINS. CONTACT DIGGER 312-744-7000 FOR LOCATES 48 HOURS PRIOR TO START OF CONSTRUCTION.

THE USE OF CONCRETE, FLOW FILL, OR THE LIKE IS PROHIBITED WITHIN 24" OF ALL GAS FACILITIES, NOR SHALL IT ENCASE ANY GAS FACILITY. A BUFFER OF 24" SAND IS TO USED BETWEEN FLOW FILL AND ALL GAS FACILITIES. A MINIMUM OF 6" FA-02 OR FM-02 SAND SHALL BE USED WHEN BACKFILLING OTHER MATERIALS AROUND ANY EXPOSED GAS FACILITY. CONTRACTOR EXPOSING GAS FACILITY IS RESPONSIBLE FOR PROVIDING THE SAND. ANY DAMAGES TO PEOPLES GAS FACILITIES SHALL BE THE RESPONSIBILITY OF THE INSTALLING UTILITY AND THEIR CONTRACTOR(S).

SERVICE MAY BE EFFECTED. USE EXTREME CAUTION NEAR ALL GAS FACILITIES
HAND EXCAVATION IS REQUIRED TO LOCATE AND EXPOSE GAS FACILITIES PRIOR TO CROSSING AND WORKING WITHIN 3' OF ALL GAS FACILITIES. CONTACT DIGGER FOR LOCATES 48 HOURS PRIOR TO START OF CONSTRUCTION. PEOPLES GAS FACILITIES ARE PRESENT WITHIN AREA OF CONSTRUCTION. DIRECTIONAL DRILLING IS CONSIDERED A HIGH RISK EXCAVATION AS DETERMINED BY PHMSA AND NTSB; AS SUCH SPECIAL CONSIDERATIONS SHALL TAKE PLACE NEAR NATURAL GAS DISTRIBUTION LINES. USE EXTREME CAUTION NEAR ALL GAS FACILITIES DURING CONSTRUCTION AND RELATED EXCAVATION ACTIVITIES. HAND DIG OR NON-INVASIVE EXCAVATION IS REQUIRED TO FIELD VERIFY THE HORIZONTAL AND VERTICAL LOCATION OF GAS FACILITIES PRIOR TO CROSSING AND WORKING WITHIN 3' OF ALL GAS FACILITIES. A MINIMUM OF 3' HORIZONTAL EDGE-TO-EDGE CLEARANCE IS REQUIRED FOR GAS MAINS WITH DIAMETERS OF 16" OR SMALLER, & 5FT EDGE-TO-EDGE CLEARANCE FOR GAS MAINS WITH DIAMETERS 18" AND LARGER.MAINTAIN A MINIMUM OF 1.5' EDGE-TO-EDGE VERTICAL CLEARANCE ON GAS MAINS 16" OR LESS IN DIAMETER, AND 2' EDGE-TO-EDGE VERTICAL CLEARANCE ON 18" AND LARGER DIAMETER GAS MAINS. CONTRACTOR MUST OBSERVE BORE HEAD WHILE CROSSING GAS FACILITIES AND VERIFY THAT MINIMUM VERTICAL CLEARANCE IS OBTAINED. LOCATIONS OF EXISTING GAS FACILITIES MUST BE VERIFIED AT SUFFICIENT INTERVALS, OR A MAX OF DISTANCE OF 50', WHEN PARALLELING TO ENSURE SEPARATION IS MAINTAINED. CONTACT SYSTEM INTEGRITY OPERATIONS SUPERVISOR, A MINIMUM OF 5 BUSINESS DAYS PRIOR TO EXCAVATION TO SET UP ON-SITE INSPECTION.CONTACT DIGGER 312-744-7000 FOR LOCATES 48 HOURS PRIOR TO START OF CONSTRUCTION AND SPECIFY EXCAVATION TYPE.

North Shop: North of Chicago Ave/Ashland Ave /North Ave
Robert Goral, 773 647-0537
Central Shop: South of Chicago Ave/ Ashland Ave / North Ave to

Dave Marquez, 773-858-1825
South Shop: South of 87th St / Ashland Ave / Chicago River / Cermak Rd
Jacob Weber, 312-806-0559

THE USE OF CONCRETE, FLOW FILL, OR THE LIKE IS PROHIBITED WITHIN 24" OF ALL GAS FACILITIES, NOR SHALL IT ENCASE ANY GAS FACILITY. A BUFFER OF 24" SAND IS TO USED BETWEEN FLOW FILL AND ALL GAS FACILITIES. A MINIMUM OF 6" FA-02 OR FM-02 SAND SHALL BE USED WHEN BACKFILLING OTHER MATERIALS AROUND ANY EXPOSED GAS FACILITY. CONTRACTOR EXPOSING GAS FACILITY IS RESPONSIBLE FOR PROVIDING THE SAND. ANY DAMAGES TO PEOPLES GAS FACILITIES SHALL BE THE RESPONSIBILITY OF THE INSTALLING UTILITY AND THEIR CONTRACTOR(S). CALL 866-556-6002 IMMEDIATELY FOR ANY DAMAGES TO THE GAS FACILITIES. ALL GAS FACILITIES ARE TO BE MAINTAINED. THIS PROJECT WILL BE PLACED ON PEOPLES GAS WATCH & PROTECT.

BUREAU OF FORESTRY :
TREE PROTECTION MEASURES:
AT A MINIMUM, NEED TO INCLUDE ORANGE SNOW FENCE TO BE INSTALLED ALONG BACK OF THE CURB-LINE, 10 FEET FROM THE BACK OF THE CURB-LINE AND AT A DISTANCE OF 5 FEET FROM EITHER SIDE OF THE TREE. IF TRIMMING IS REQUIRED FOR LINE INSTALLATION, IT WILL BE DONE BY AN INSURED TREE SERVICE COMPANY. TRIMMING WILL BE DONE IN ACCORDANCE TO AMERICAN NATIONAL STANDARDS INSTITUTE GUIDELINES, LEAVING THE FORM AND STRUCTURE OF THE TREES INTACT.

TUNNELING SPECIFICATIONS (EACH SIDE OF TREE)
TREE SIZE* TUNNEL/TRENCH DISTANCE
< 10" 5 FEET
10" TO 19" 10 FEET
> 19" 15 FEET
* DBH = DIAMETER AT BREAST HEIGHT (4.5')

- STAY OUT OF THE DRIP LINE
- STOP TRENCHING WHEN ROOTS OF (2) INCHES OR LARGER ARE ENCOUNTERED.

CTA BUS ROUTES :
PLEASE NOTIFY CTA AT LEAST (2) TWO WEEKS PRIOR TO ANY SIDEWALK, LANE, OR STREET CLOSURES, OR THE REMOVAL OF ANY BUS STOP SIGNS SO THAT CTA CAN FACILITATE ANY NECESSARY DETOURS OR BUS STOP RELOCATIONS.

SCALE: N.T.S	SHEET NUMBER L-001	
SHEET TITLE: ELECTRICAL GENERAL NOTES		

- Electrical Demolition Notes:
1. Removal and maintenance of underdeck lighting shall be incidental to the pay item "Electric Underdeck Lighting".
 2. Temporary lighting design shall be submitted and approved to the engineer prior to construction. The approved design shall then be installed prior to stage construction.

Controller 1:
Circuit 1 - (2) Underpass LED Luminaire
Circuit 2 - (2) Underpass LED Luminaire

Contractor to coordinate the removal and installation of F / A cable with Office Of Emergency Management and Communications (OEMC)

BILL OF MATERIALS		
Items listed below are included with the Pay Item "Electric Underdeck Lighting".		
Description	Unit	Quantity
Electric Cable In Conduit, 1/C No. 4	Lin Ft	753'
Flexible Liquid-Tight Conduit, 3/4"	Lin Ft	20'
Internal Control Node	Each	2
Underpass Luminaire, LED, 120 Volts	Each	4
Underpass Lighting Controller	Each	1
Handhole 30" x 36" W/ 24" Frame and cover	Each	1
Remove Existing Lighting System	L Sum	1
Temporary Lighting System	L Sum	1
Duct / DRBR, 2", SCH 80	Lin Ft	114'
Duct / DRBR, 3", SCH 80	Lin Ft	207'
PVC Conduit in Trench, 2", SCH 80	Lin Ft	102'
Service Disconnect Cabinet	Each	1
Elbow and Riser, 2"	Each	4
Attached conduit, 3/4". galvanized rigid steel	Lin Ft	120'
Cable in conduit, 1C#12	Lin Ft	320'
Underpass Lighting Node Cabinet	Each	1
Junction Box, 6"x6"x4"	Each	4

BILL OF MATERIALS (FIRE ALARM)		
Description	Unit	Quantity
6 PR F/A cable	Lin Ft	218'
Dead End Cable Assembly W/ Strandvise	Each	2

- Electrical Notes:
1. All electrical work shall conform with all national, state, and local codes.
 2. No luminaires, conduit, junction boxes, or any appurtanances shall be mounted to the bridge superstructure without prior approval from Union Pacific Railroad.
 3. Contractor shall field verify exact locations, quantities, and type of utilities in the area prior to commencement of any work.
 4. Coordinate all electrical installation work with civil, structural drawings, construction phases schedule and City of Chicago Department of Transportation, Division Electrical Operations.
 5. Coordinate installation and connection of new electrical service and underpass lighting controller with ComEd and City of Chicago Department of Transportation, Division Electrical Operations. The Underpass Controller and Cabinet shall be grounded with #8 wire on 1/2" GRS conduit.
 6. See electrical detail drawings for typical standard underpass lighting details and underpass lighting controller.
 7. Luminaires shall be mounted by expansion anchors to the face of the pier cap as high as possible. All conduits to be fastened securely at 5' intervals with beam clamps
 8. Luminaires mounted over roadway to be pivoted at an angle of 45 deg from vertical and luminaires mounted over sidewalk to be pivoted at an angle of 35 deg from vertical.

Refer civil plans for pavement removal / replacement quantities

 - Proposed 3/4" liquid tight conduit, with (2)#12 cable
 - Proposed (3)#12 cable to be installed in 3/4" conduit, unless otherwise noted
 - Proposed underpass lighting controller, 120V/240V
 - Proposed underpass node cabinet with 2 nodes
 - Existing Comed pole
 - Install 30" Handhole as per Dwg. No. 867 with 24" Frame and Cover
 - Install 3" Elbow and Riser on pole
 - Remove Embedded pole
 - Install 3" Service entrance head & Dead End cable assembly W/ strandvise
 - Proposed F / A conduit
 - Proposed DEO conduit (SCH 80)

NOTES:

- 1.) ENCLOSURE SHALL HAVE A PIANO HINGE, DOOR CLAMPS AND HASP/STAPLE FOR PADLOCK.
- 2.) TERMINAL BLOCK SHALL HAVE A MINIMUM CURRENT RATING OF 200A. LINE SIDE SHALL ACCEPT #2 THROUGH #3/0 CABLE. LOAD SIDE SHALL ACCEPT (1) #2 AND (1) #2/0 CABLE.
- 3.) LOAD CENTER SHALL INCLUDE PROVISIONS FOR MAIN AND BRANCH BREAKERS. LIVE BUS SHALL BE PROTECTED IN A MANNER WHICH ALLOWS FUTURE INSTALLATION OF INDIVIDUAL CIRCUIT BREAKERS WITHOUT AFFECTING PROTECTION OF REMAINING BUS.
- 4.) MAIN BREAKER SHALL BE SIZED AS NOTED ON THE PLANS.
- 5.) THE NUMBER OF 15A SINGLE POLE CIRCUIT BREAKERS SHALL BE AS NOTED ON THE PLANS. A MINIMUM OF 4 BREAKERS SHALL BE PROVIDED.
- 6.) FOR 2-WIRE 120V APPLICATION, SEE DETAIL "A".

DESIGN NOTES

1. In the event of a conflict between the design plans and the standards, the design plans shall control.
2. Location of known utilities is approximate. Location shall be verified prior to construction. Notify DIGGER/811 CHICAGO, 1-312-744-7000, at least 48 hours prior to construction.

RIGHT-OF-WAY

1. Approx. 64'-0" east of existing Main Track No. 1 centerline.
2. Approx. 49'-0" west of existing Main Track No. 2 centerline.

LAYOUT

1. Stationing: Sta. 74+90.26, face of Existing Pier #1 of existing Bridge No. 1,40.
2. Elevation Datum: Chicago City Datum (CCD)
3. Benchmark: BM #276, Elev. 14.66 (CCD), 6.4 feet north of south line of W Congress Parkway and 47.1 feet east of east line of S Washtenaw Avenue.
4. Profile: Increase in rail elevation 1'-0".
Rail Size: 136# (Main Track No. 1), 136# (Main Track No. 2)
5. Alignment: Tangent.
6. Information used to prepare this drawing in addition to reference drawings:
Survey conducted by AMERICAN SURVEYING & ENGINEERING, from 2012 to 2017.
Geotechnical Design Report prepared by WANG ENGINEERING, INC., dated 01/08/2021.

PILE DRIVING

1. All piles shown on Sheet K2 shall be driven to 133 ton service capacity. Soldier piles shall be driven to a minimum tip elevation of Elev. -24.00.
2. Constructor shall assume one pile load test will be required in accordance with City of Chicago Department of Buildings. If pile load test is required, Constructor shall be performed in accordance with ASTM D1143 using Procedure A.

DESIGN

1. The proposed superstructure and substructure have been designed in accordance with the AREMA Manual for Railway Engineering, Chapter 8: Concrete Structures and Foundations and Chapter 15: Steel Structures, except longitudinal load, which is designed per the 1996 AREA Manual for Railway Engineering.
2. This superstructure was designed for Cooper E80 Live Load or alternate loading, where applicable, plus impact with a 30" maximum total depth of ballast. The substructure was similarly designed, but without impact (AREMA Chapter 8: Article 2.2.3.d.3).
3. This drawing was prepared using 0" (min.) of ballast under timber ties.

EXISTING MASONRY ABUTMENT RESTORATION NOTES

Existing Masonry Abutment Restoration consists of tuckpointing the joints and cleaning and painting the exposed surface of the existing masonry abutments. Limits include the width of railroad ROW, both abutments. All surfaces exposed to the roadway below should receive restoration treatment.

TUCKPOINTING

1. Loose, unsound or disintegrated mortar pointing between the masonry joints shall be removed and the joints cleaned and washed before pointing with new mortar. The exposed beds and joints shall be thoroughly cleaned by chipping with chisels or similar tools, scraping and brushing out the mortar to a minimum depth of 1-1/2 inches, and washing thoroughly with clean water.
2. Areas to be tuckpointed should be wet thoroughly to prevent absorption of water from the mortar.
3. Mortar shall be tucked into the joints and finished with a smooth face struck flush with masonry face. All excess material shall be removed and the joint tooled to a neat workmanlike finish.
4. Tuckpointing mortar shall be FX 262 Repair Mortar as manufactured by Fox Industries or Commercial Grade FastSet Repair Mortar as manufactured Quikrete, or an approved equal. The mortar shall be applied according to the manufacturer's specifications.

CLEANING

1. Constructor shall use water cleaning to clean the existing abutment masonry surfaces of paint, heavy soiling, staining, organic and inorganic contaminants, and all loose, foreign material to the satisfaction of the Engineer. Cleaning operations shall consist of pressure spraying, hand scrubbing and rinsing. Cleaning operations shall be performed after all tuckpointing repairs are performed to the existing abutments.
2. Constructor shall provide water cleaning equipment including a trailer-mounted water tank, pumps, high-pressure hose, wand with safety release cutoff control, nozzle, and auxiliary water re-supply equipment. Water used for cleaning shall be potable and obtained from a local source. Water shall also be filtered to remove minerals resulting in a neutral pH prior to its use.
3. Hand scrubbing of masonry shall be performed with natural- or nylon-bristled, hand held brushes. Wire brushes shall not be used.
4. Protective covers and barriers shall be provided as required to prevent over-spray onto adjacent surfaces or new steel superstructure and bearings.

5. Pressure spraying and rinsing equipment shall be capable of a discharge capacity of 55 to 400 psi and 2.5 to 3.0 gallons per minute for general surface cleaning operations. The water tank and auxiliary re-supply equipment shall be of sufficient capacity to permit continuous operations. Equipment shall not be operated at a pressure which will cause etching or other damage to the masonry surface or mortar joints.
6. Cleaning operations shall commence when the air temperature is above, and expected to remain above, 40 degrees F for not less than 7 consecutive days.
7. Adjust cleaning operations as required to ensure masonry and mortar joints are not damaged and an acceptable process is obtained.

PAINTING

1. Apply paint to all existing and new abutment surfaces in accordance with paint manufacturer's specifications.
2. Constructor shall coordinate paint system type, color and sheen with the CDOT - Division of Engineering.

PROPOSED CONSTRUCTION SEQUENCE

Construction of this bridge to be coordinated with that of I-290 bridge.

1. All work to be performed by Contractor, except where noted in parentheses. Both tracks shall remain in service except for natural windows and/or prearranged work blocks. Contractor and Railroad shall define Existing Main Track No. 1 and Track No. 2 extended work block date and duration. Extended work block shall be prearranged during one weekend in each construction phase. Work shall generally include, but is not limited to:

PHASE 1

1. Existing Main Track No. 1 and No. 2 to remain in service except during extended work block.
2. During work windows, install temporary shoring between Phase 1 and Phase 2 and drive pile for Phase 1 construction (Immediately remove pile to B/R).
3. Close traffic service on Existing Main Track No. 1 for extended work block (Railroad).
4. Remove existing rail, ties, ballast and OTM (Railroad).
5. Remove existing steel span (2 eastern girders), bearings, riser blocks and excavate as required to remove existing backwall on abutment for installation of new bridge for Proposed Main Track No. 1.
6. Excavate as required and remove driven piles to final cutoff elevations.
7. Install precast concrete end cap and wingwall.
8. Install Phase 1 portion of TPG span.
9. Install portion of abutment backfill and subballast.
10. Place ties, rail and OTM (Railroad).
11. Place Main Track No. 1 back in service on proposed alignment (Railroad).
12. Construct cast-in-place pedestals for sacrificial beam.
13. Install sacrificial beam.

PHASE 2

1. Main Track No. 1 and Existing Main Track No. 2 to remain in service except during extended work block.
2. During work windows, drive pile for Phase 2 construction (Immediately remove pile to B/R).
3. Close traffic service on Existing Main Track No. 2 for extended work block (Railroad).
4. Remove existing rail, ties, ballast and OTM (Railroad).
5. Remove remaining existing steel spans, bearings, riser block and excavate to remove existing backwall on abutment as required for installation of new bridge for Proposed Main Track No. 2.
6. Excavate as required and remove driven piles to final cutoff elevations.
7. Install remaining precast concrete end cap and wingwall.
8. Install Phase 2 portion of TPG span for Proposed Main Track No. 2.
9. Install remaining portion of abutment backfill and subballast.
10. Remove temporary shoring.
11. Place ties, rail and OTM (Railroad).
12. Place Main Track No. 2 back in service on proposed alignment (Railroad).
13. Remove remaining existing riser blocks and backwall on north abutment and excavate as required for installation of new bridge for Access Road.
14. Construct cast-in-place concrete bridge seat for proposed Access Road Bridge.
15. Install 33" x 36" and 33" x 48" PPC Deck Beams.
16. Construct cast-in-place concrete walls, wingwalls, and retaining wall for proposed Access Road Bridge.
17. Install remaining portion of abutment backfill as required.
18. Install cast-in-place concrete parapet on Access Road Bridge.
19. Install waterproofing and aggregate surface course on Access Road Bridge.
20. Restore area to original condition or better.

BENDING DIAGRAM
(DIMENSIONS ARE OUT TO OUT)

NOTE:
BAR DESIGNATIONS CONSIST OF BAR SIZE & LENGTH FOLLOWED BY THE LETTER "b" IF BENT. BAR SIZES ARE REPRESENTED BY THE LETTERS A THROUGH L CORRESPONDING TO BAR SIZE #2 THROUGH #18. BAR LENGTHS ARE GIVEN IN FEET AND INCHES; THE LAST TWO DIGITS ARE INCHES.
EST. WT. OF REINFORCING STEEL = 125 LB.

- NOTES:
- THE STRIP SEAL SHALL BE MADE CONTINUOUS AND SHALL HAVE A MINIMUM THICKNESS OF 1/4". THE CONFIGURATION OF THE STRIP SEAL SHALL MATCH THE CONFIGURATION OF THE LOCKING EDGE RAILS. OPEN OR "WEBBED" STRIP SEAL GLAND CONFIGURATIONS ARE NOT PERMITTED. THE GLAND SHALL BE SIZED FOR A MAXIMUM RATED MOVEMENT OF 4 INCHES.
 - THE LOCKING EDGE RAILS DEPICTED ARE CONCEPTUAL ONLY, EXCEPT FOR THE MINIMUM DIMENSIONS SHOWN. THE ACTUAL CONFIGURATION OF THE LOCKING EDGE RAILS AND MATCHING STRIP SEAL MAY VARY FROM MANUFACTURER TO MANUFACTURER. FLANGED EDGE RAILS WILL NOT BE ALLOWED. THE INSIDE OF THE LOCKING EDGE RAIL GROOVE SHALL BE FREE OF WELD RESIDUE. LOCKING EDGE RAILS MAY BE SPLICED AT SLOPE DISCONTINUITIES.
 - THE MANUFACTURER'S RECOMMENDED INSTALLATION METHODS SHALL BE FOLLOWED.
 - THE JOINT OPENING AND DECK DIMENSIONS DETAILED ON THE SUPERSTRUCTURE ARE BASED ON A ROLLED RAIL EXPANSION JOINT. IF THE CONTRACTOR ELECTS TO USE THE WELDED RAIL EXPANSION JOINT, THE OPENING AND DECK DIMENSIONS SHALL BE MODIFIED ACCORDINGLY. REQUIRED MODIFICATIONS SHALL BE MADE AT NO ADDITIONAL COST TO UPRR.
 - ALL STRIP SEAL EXPANSION JOINT STEEL COMPONENTS SHALL BE GALVANIZED AFTER FABRICATION ACCORDING TO ARTICLE 520.03 OF THE STANDARD SPECIFICATIONS.
 - COST OF SIDE RETAINERS AND ACCESSORIES ARE INCLUDED WITH PRECAST PRESTRESSED CONCRETE DECK BEAMS.
 - EQUIVALENT ROLLED ANGLE WITH STIFFENERS WILL BE ALLOWED IN LIEU OF WELDED PLATES.
 - THE SIDE RETAINERS SHALL BE GALVANIZED AFTER SHOP FABRICATION ACCORDING TO AASHTO M 111 AND ASTM 385.
 - ANCHOR BOLTS SHALL BE ASTM F1554 ALL-THREAD (OR AN ENGINEER-APPROVED ALTERNATE MATERIAL) OF THE GRADE AND DIAMETER SPECIFIED. ASTM A307 GRADE C ANCHOR BOLTS MAY BE USED IN LIEU OF ASTM F1554 GRADE 36 (Fy = 36 KSI). THE CORRESPONDING SPECIFIED GRADE OF AASHTO M314 ANCHOR BOLTS MAY BE USED IN LIEU OF ASTM F1554. ANCHOR BOLTS AND PLATE WASHERS SHALL BE GALVANIZED ACCORDING TO AASHTO M 232.
 - DRILLED AND SET ANCHOR BOLTS FOR SIDE RETAINERS SHALL BE INSTALLED ACCORDING TO ARTICLE 521.06 OF THE STANDARD SPECIFICATIONS.
 - AFTER THE OVERLAY IS PLACED AND THE DECK PARAPETS ARE POURED AND CURED, THE STEEL WEDGES SHALL BE REMOVED.

NOTE:
BAR DESIGNATIONS CONSIST OF BAR SIZE & LENGTH FOLLOWED BY THE LETTER "b" IF BENT. BAR SIZES ARE REPRESENTED BY THE LETTERS A THROUGH L CORRESPONDING TO BAR SIZE #2 THROUGH #18. BAR LENGTHS ARE GIVEN IN FEET AND INCHES; THE LAST TWO DIGITS ARE INCHES.

- NOTES:
- PRESTRESSING STEEL SHALL BE UNCOATED HIGH STRENGTH, LOW RELAXATION 7-WIRE STRAND, GRADE 270. THE NOMINAL DIAMETER SHALL BE 1/2" AND THE NOMINAL CROSS-SECTIONAL AREA SHALL BE 0.153 SQ. IN.
 - THE 1" DIA. RODS IN THE TRANSVERSE TIE ASSEMBLY SHALL BE TIGHTENED TO A SNUG FIT AND THE THREADS SET. POCKETS ON EXTERIOR FACES OF BRIDGE SHALL BE FILLED WITH GROUT AFTER TRANSVERSE TIE ASSEMBLY IS IN PLACE.
 - REINFORCEMENT BARS SHALL CONFORM TO ASTM A 706, GRADE 60.
 - TWO 1/8" FABRIC ADJUSTING SHIMS OF THE DIMENSIONS OF THE EXTERIOR BEARING PAD SHALL BE PROVIDED FOR EACH BEARING PAD LOCATION.
 - FABRIC BEARING PADS SHALL CONFORM TO IDOT STANDARD SPECIFICATION 1082.01.
 - EACH BEAM SHALL HAVE FOUR LIFTING LOOPS, TWO CAST IN EACH END. LOOPS SHALL BE BURNED OFF AFTER BEAMS HAVE BEEN ERECTED.
 - LIFTING LOOPS SHALL BE 3 - 1/2" DIA. 270 KSI STRANDS AS SHOWN.
 - A MINIMUM 2 1/2" DIA. LIFTING PIN SHALL BE USED TO ENGAGE THE LIFTING LOOPS DURING HANDLING.
 - CORROSION INHIBITOR, PER ARTICLE 1020.05(B)(12) AND 1021.06 OF THE STANDARD SPECIFICATIONS, SHALL BE USED IN THE CONCRETE FOR PRECAST PRESTRESSED CONCRETE DECK BEAMS.
 - COMPRESSIVE STRENGTH OF PRESTRESSED CONCRETE, f'c, SHALL BE 6000 PSI.
 - COMPRESSIVE STRENGTH OF PRESTRESSED CONCRETE AT RELEASE, f'ci, SHALL BE 5000 PSI.
 - KEYWAY SURFACES SHALL BE CLEANED TO REMOVE FORM OIL OR OTHER BOND BREAKING MATERIAL PRIOR TO SHIPMENT OF THE BEAMS. CLEANING SHALL BE DONE BY SANDBLASTING INTO THE KEYWAY AREAS BETWEEN TOP OF THE BEAM AND THE BOTTOM EDGE OF THE BEAM.
 - ALL BAR DIMENSIONS ARE OUT TO OUT.

GENERAL NOTES

GENERAL

1. All work requirements shown on the design and not otherwise detailed shall be accomplished as specified in Union Pacific Railroad (UPRR) Specifications and the American Railway Engineering and Maintenance-of-Way Association (AREMA) Manual for Railway Engineering. In the event of conflicts between specifications, the more restrictive shall apply.
2. Construction means and methods shall comply with the All Permits Issued (API) package.
3. Field verify all dimensions, stations and elevations prior to start of construction.
4. Beams shall be supported by blocking within 1'-6" of ends during storage and transport. Store beams in level position. Beams shall be stacked no more than 3 high.
5. Contact the Union Pacific "Call Before You Dig" number 90 days (not less than 60 days) prior to proposed construction start date. Prior to construction, confirm that all necessary relocations have been completed. The CBYD number is: 1-800-336-9193.
6. Location of known utilities is approximate. Location shall be verified prior to construction. Notify Call 811 "Call Before you Dig" number at least 48 hours prior to construction.

PILE DRIVING

1. All piles shall be driven to capacity shown in design plan set.
2. If any numbered pile cannot be driven to these capacities, the UPRR Office of Structures Design shall be notified.
3. Estimated capacity of driven piles shall be calculated using the Modified ENR formula, with Factor of Safety of 5. Direct questions to the UPRR Office of Structures Design. Pile driving records and estimated capacities shall be submitted to the UPRR Office of Structures Design.
4. Vibratory hammers shall not be permitted to drive any portion of any bearing piles.
5. Splice pile per standard drawing Plan No. 531110, Sheet No. HI for H-Piles or Plan No. 531120, Sheet No. I for pipe piles. Pile splices shall be located a minimum of 10' below the proposed or existing ground surface, whichever is lower.
6. Mark every pile with a dimension indicating the pile depth from cutoff to point of pile. The dimension shall be rounded to the nearest foot. The mark shall be welded on the outside face, low mile post side on the pile flange, approximately 1'-0" below the bottom of the cap, and in numbers of approximately 3" in height. If a pile is not exposed, no mark is required.
7. After pile driving is complete, provide pile driving logs to:
- UPRR Senior Manager Structures Design
1400 Douglas St., Stop 0910
Omaha, NE 68179

FIELD WELDING

1. Welding shall be accomplished with the SMAW or FCAW Process.
2. Welding shall be in compliance with the requirements specified in AWS D1.5, except $\frac{3}{16}$ " fillet welds may be made with a single pass.
3. Welding electrodes shall be E7018 for SMAW or E71T-7 for FCAW. For other acceptable electrodes, refer to AWS D1.5.
4. Union Pacific Railroad Employees engaged in welding on structures shall have valid certification through Course ES20, Advanced Welding.
5. Contract welders shall possess valid AWS qualifications. Welders shall submit a Procedure Qualification Report (PQR) and Weld Procedure Specification (WPS) for each weld type to be performed. Welders shall be able to present documentation verifying that they have performed the specific weld(s) within the prior six months upon request.

GRADING

1. Provide and place all fill and subballast material per UPRR Grading Specifications. Perform grading as required to drain and match existing embankments and upstream and downstream channel flowline.
2. Perform grading as required for construction of the new structure and replace areas removed and disturbed in the course of construction to a condition equal to or better than existing.

WELL-COMPACTED FILL

1. Well-compacted fill shall be well-graded granular soil free of any organic material, stones larger than 3 inches, frozen lumps, debris or excessive moisture. All compaction shall be determined using ASTM D1556 for field test and ASTM D1557 for moisture and density. Fill shall be compacted to 95% of maximum dry density as defined in ASTM D1557 (Modified Proctor). Fill shall be placed in layers not to exceed 12 inches.

GROUT NOTES

NON-SHRINK GROUT

1. Non-shrink grout shall conform to the requirements of ASTM C1107.
2. Non-shrink grout shall meet the following strength requirements:
- 1 day: 3,200 psi
7 days: 6,000 psi

EPOXY GROUT

1. Epoxy grout shall consist of a 3-component epoxy resin system.
- Two liquid epoxy components.
One inert aggregate filler component.

CONTROLLED LOW-STRENGTH MATERIAL (CLSM)

1. Controlled Low-Strength Material is a self-compacting, cementitious fill material with an unconfined compressive strength of 50 to 300 psi. The mixture shall consist of water, Portland cement, fly ash, and sound fine or coarse aggregate or both. The mix design shall allow adequate flowability without segregation of aggregates. Hardening time is of prime importance and CLSM should develop 50 psi in about one hour. The maximum layer thickness for CLSM shall be three feet. Additional layers shall not be placed until the CLSM has lost sufficient moisture to be walked on without indenting more than two inches.

CONSTRUCTOR NOTES (WHEN APPLICABLE)

CONSTRUCTOR DEFINITION

Construction By	Term	Refers To
UPRR	Constructor	Manager Bridge Construction
Contractor	Constructor	Contractor

DIVISION OF RESPONSIBILITY

- A. RAILROAD (Unless Noted Otherwise by MBC)
1. Remove ties, rail and OTM from existing bridge.
2. Provide and install ballast, ties, rail and OTM for proposed bridge.
3. Provide material as shown in the Bill of Material.
4. Provide and install Private Property/No Trespassing sign and bridge marker signs on right side at each end of bridge.
- B. CONSTRUCTOR
1. Coordinate all construction activities with the Railroad.
2. Before ordering any material, Constructor shall make a detailed field inspection of the site verifying all pertinent dimensions and elevations. Any variations in dimensions or elevations from those shown on the drawings shall be reported immediately to the UPRR Project Manager.
3. Any modifications to this design shall be approved by the UPRR Office of Structures Design prior to construction.
4. Verify the location, relocation, abandonment, and/or temporary support of all utilities affected by the construction of the structure and embankment and coordinate these activities with the appropriate utility companies, agencies and/or authorities.
5. Apply for and obtain all construction permits necessary to perform the work.
6. Bill of Material and Schedules are provided for information only. Constructor shall be responsible for providing all material, not provided by the Railroad, required to complete the work.
7. Perform all work not performed by the Railroad.
8. Provide the Railroad with a detailed construction plan defining the activity, schedule and procedure for each aspect of the work. Construction shall not begin until the construction plan has been approved by the Railroad.
9. Provide all temporary structures (shoring, bracing and/or falsework) required to support and protect the existing embankments and structures affected by the work. Provide the Railroad with details, design and procedure for all temporary structures. All temporary structures shall be designed, signed and sealed by a professional engineer registered in the State that the structure is to be constructed. All temporary structures shall be approved by the UPRR Office of Structures Design prior to beginning construction.
10. Provide temporary guardrail system as directed by UPRR Project Manager. Guardrails on shoring shall include but not be limited to the following:
- The top edge height of the top rail shall be 42" +/- 3" above the walking/working surface.
- At least one midrail shall be provided, evenly spaced between walking/working surface and top rail.
- Metal or timber posts or uprights shall be spaced at maximum intervals of 10'-0".
- Entire guardrail system, including anchorages, shall be capable of withstanding without failure, a force of 200 lbs. applied in any outward or downward direction at any point.
- Guardrail system shall be surfaced to prevent injuries from punctures and lacerations and prevent snagging of clothing. The ends of top rails and midrails shall not extend past the posts or uprights.
- If conditions warrant, i.e. pedestrian traffic/weather, additional protection shall be provided such as screens or mesh to prevent slipping between the midrail and walking/working surface.

11. Direct channel flow as required to perform work.
12. Remove debris and ballst from channel as directed by the Railroad.
13. Accomplish activities within the schedule specified in the approved construction plan.

GENERAL NOTES

FILE OWNER: UPRR DATE: MAY, 2020

PLAN NO.: 531100 SHEET: T2

Alan Baker

05-04-2020

UPRR - MGR SPECIAL PROJECTS STRUCTURES DESIGN

- INSTALLATION INSTRUCTIONS:**
(NOTE: SPLICE IS SHOWN INSTALLED ON UPPER PILE SECTION FIRST. ALTERNATIVELY, SPLICE MAY BE INSTALLED ON BOTTOM SECTION FIRST.)
1. NOTCH THE END OF H-PILE SECTION TO RECEIVE SPLICE FIRST (NOTCH TO ACCOMMODATE THE SPLICE SPACER BAR).
 2. FIT SPLICE OVER NOTCHED END OF H-PILE AND FILLET WELD SPLICE END TO PILE WEB AS SHOWN.
 3. PLACE THE UPPER H-PILE SECTION INTO POSITION ONTO THE LOWER SECTION.
 4. COMPLETE FILLET WELD ALONG SPLICE EDGES.
 5. WELD FLANGE JOINT BETWEEN UPPER AND LOWER PILE SECTIONS.

PILE SPLICE DETAIL
SCALE: 1"=1'-0"

ALTERNATE PILE SPLICE DETAIL
SCALE: 1"=1'-0"

- TIP REINFORCEMENT INSTALLATION INSTRUCTIONS:**
1. FIT POINT ONTO SQUARE CUT PILE.
 2. WELD POINT TO THE PILE IN EITHER FLAT OR VERTICAL POSITION.
 3. FILL THE AREA ACROSS BOTH FLANGES WITH WELD.

PILE TIP DETAIL
SCALE: 1"=1'-0"

PILE SOCKET DETAIL
SCALE: 1/2"=1'-0"
EST. VOLUME OF CONCRETE = 0.9 CU. YD. PER 5' SOCKET DEPTH

- PILE SOCKET NOTES:**
1. SEE BENT DESIGN NOTES TO DETERMINE WHEN PILE SOCKETING IS REQUIRED.
 2. PILING SHALL BE SEATED IN PREDRILLED HOLES IN THE ROCK AND ENCASED IN CONCRETE WITHIN THE BEDROCK (SEE DETAIL).
 3. MINIMUM DEPTH OF PILE SOCKET SHALL BE 5'-0" INTO COMPETENT ROCK.
 4. PILING WITH TIP REINFORCEMENT SHALL BE PLACED INTO ROCK SOCKET AND DRIVEN TO ACHIEVE REQUIRED CAPACITY.
 5. SEATED PILE SHALL BE ENCASED IN ROCK SOCKET WITH CONCRETE.
 6. MINIMUM COMPRESSIVE STRENGTH OF CONCRETE SHALL BE 4000 LB. PER SQUARE INCH AT 28 DAYS.
 7. BORE 2" DIA. HOLE IN CENTER OF PILE SEAT TO A MINIMUM DEPTH OF 2 SOCKET DIAMETERS.

GENERAL NOTES:

Longitudinal bracing between bents required in selected bays on bridges longer than 200 ft and some bridges not composed entirely of concrete spans. See Sheets H5 & H6.

Pile capacities:
For required driven pile capacities, see "Maximum Pile Load" table.

Steel:
Piles - ASTM A572, GR. 50
Pile splices - ASTM A572 Gr. 50
Bracing - ASTM A572

Coating Notes:
Where specified, coal tar coating shall be applied to the external face of piles in accordance with the following guidelines:

Surface Preparation SSPC-SP6/NACE 3
Coating 2 Coats @ 8 Mils For A Total 16 Mil DFT
Masking 3" Mask On Each End
Material Specification Corp of Engineers Formula C-200a 8
SSPC Paint 16

Welding:
Use shielded metal arc welding (SMAW) or flux core arc welding (FCAW) process per AWS D1.5. Acceptable welding electrodes shall be E7018 for SMAW or E71T-7 for FCAW. For other acceptable electrodes, refer to AWS D1.5.

Splices:
Splices shall be made a sufficient distance above the ground or water (not less than one foot) so that the splice can be observed during driving. The number of splices shall be kept to a minimum. Splicing cut-offs or short pieces to make a main bearing pile is not permitted. The pile shall be driven so that the upper splice is at least 10 feet below the ground surface.

Tip reinforcement:
Pile tip reinforcement shall be used where piles may be damaged by driving through heavy gravel, cobbles, boulders or formations known to contain obstructions. Tip reinforcement shall also be used when the pile will bear on rock.

Driving tolerances:
Variations greater than 1/4 inch per foot from vertical or batter line shall not be allowed. The deviation of the top of piles in a bent shall not exceed one inch from the plan location. Rotation of pile about its centerline shall not exceed 5 degrees from its orientation as shown in plans. Piles not meeting tolerance requirements or out of line as to impair usefulness, or piles that are damaged in driving as to impair structural capacity, shall be pulled and redriven or an additional pile shall be driven to provide added support. If any numbered pile cannot be driven to their capacity, notify the UPRR Office of Structures Design.

BENT DESIGN NOTES:

Selection of pile configuration and maximum heights based on equilibrium superelevation (regardless of actual superelevation installed). Refer to UPRR Track Standards Book, Std. Dwg. 0020 latest revision.

Standard design is valid for minimum pile penetration of 10' if geotechnical investigation demonstrates that piles can be firmly seated in hard rock or shale; otherwise minimum pile penetration of 25' required. If these values cannot be achieved, piles shall be socketed into rock per detail on this sheet. For any other conditions, special design is required.

For span lengths less than 28', use values shown for 28' spans.

Bent shall be driven per requirements of longer span length supported. For example, for a bent supporting 28' and 34' spans, drive per 34' span requirements.

Maximum track offset (from bridge centerline) is 6" with this bent standard.
